## Web Design in Nvu

Nvu (pronounced “N-view”) is an open source software that enables you to create your own web pages using a WYSIWYG editor (“what you see is what you get”). When creating a web page on Nvu, you can also add functionality rather than just the design elements, flicking between the design and HTML sections.

You do not need to be familiar with HTML or CSS to use this software, so Nvu is perfect for beginners who want to learn more about web design. Nvu can be downloaded on either Windows, Mac or Linux operating systems.

### Skills

- Problem Solving
- Communication
- Improving Own Learning and Performance
- Working with Others
- ICT
- Numeracy
- Creativity

### Key Learning Outcomes

- Develop own website using HTML
- Develop new skills
- Improved understanding of the Computer Science Industry

### Workshop Outline

- Computer Science Basics
- Fundamental Web Development Principles
- Learning HTML
- Building a blog or personal website

### Why Technocamps?

Technocamps is an exciting project that provides free workshops to young people on programming, robotics, game design, app development and much more... It is about getting young people (11-19) in Wales excited about Computer Science and STEM and challenging them to think about the world around them in a different way.
